

Vars: Binding Vars & Calculated Vars

OpalBinding - 控件

- vars更新, mark_dirty 触发 控件重绘

```
<%= input binding: :text, value:0 %>
```

JS

生成的前端HTML代码, 每个widget生成唯一的id

HTML

```
<input type='text' value='0' id='text_ABCDEF'>
```

OpalBinding中保存的对应关系

```
binding = [ [:text, :text_ABCDEF, ...] ]  
vars = [:text => 0]
```

```
$dirty_vars = [:text, xx, xx]  
cur_dirty = $dirty_vars.pop -> 处理队列第一个
```

```
$document[:text_ABCDEF].value = $vars[:text]
```
