## Widgets - Input

• on change 可以定义在Binding Var变化的时候触发事件 • 改变了Binding Var之后,mark\_dirty 让所有和Binding Var相关的都进行重 绘(绑定控件)和重新计算(关联表达式的Calculated Var)

```
<h4>0n Change Event</h4>
Please input your email: <%= input binding: :email %><br/>>
<span style="color:red"><%= text binding: :validation %></span>
<% on_change :email, %(</pre>
    if :email =~ /[a-zA-Z0-9-]+@[a-zA-Z0-9-]+\.[a-zA-Z0-9-]+/ then
         :validation = ""
    else
         :validation = "invalid email"
    end
    mark_dirty("validation")
```

On Change Event Please input your email: invalid email

## Widgets - Input
